PROJECTS

Memory Map

Interactive Memories

- Built a full-stack web application using Next.js 15, TypeScript, and Prisma featuring interactive memory mapping with MapBox.
- Developed authentication, session management, and a content moderation dashboard to support secure user interactions.

GoSummit

Ticketing Mountains App

- Developed a mountain ticket reservation platform with online booking and Midtrans payment integration.
- Built a real-time quota management system to prevent overbooking during ticket reservations.

Flask Analytics

Public Health Data
Dashboard

- Built an interactive dashboard to visualize and analyze regional diabetes mellitus datasets.
- Processed JSON and CSV data into structured health statistics for easier data exploration.

EDUCATION

Institut Teknologi Bandung

Bachelor's Degree
Sep 2022 – Present

- Studying core areas of informatics, including programming, database systems, web development, and software engineering.
- Focused on building practical web-based applications through academic and personal projects.

SMA Negeri 5 Karawang

Science Major
Jan 2019 – May 2022

- Developed analytical thinking and problem-solving skills through science-focused subjects.
- Participated in the IPTEK extracurricular program, building early interest in technology and digital innovation.
